**STEP**

**1**

What you will need: 5/32" allen wrench (supplied)

The Camdapter Camstrap is designed so it can be mounted to virtually every camera, Even those with tripod threads located adjacent to the battery door. The adapter design allows access to your battery while mounted, and the durable leather strap is fully adjustable. See Figure 1-A.

Figure 1.

**STEP**

**2**

Lay your camera down lens side up on a clean flat surface. Using the supplied allen wrench, attach the CamStrap adapter to your camera's tripod mount as shown in Fig. 2A. Unlace the webbing from the sliplock (2-B) and remove the split ring (2-C). Adjust the loop to comfortably fit your hand.

Figure 2.

**STEP**

**3**

Adjust the bottom section of the CamStrap by sliding the leather strap closer to the adapter. Pull on the webbing (the thinner, woven nylon part of the CamStrap) as you slide the leather strap into place. See Figure 3-A.

It generally works best if the slot on top of the CamStrap (where the webbing comes out) is aligned with the side of your camera. See Figure 3-B.

Installation  
Instructions

For more information and to see other Camdapter products, visit our website @ www.camdapter.com

**STEP 4**

Loop strap webbing through camera's top strap lug, or use the included split ring if needed, as some cameras have a small eyelet instead of a strap lug. Adjust strap to fit your hand, and be sure to go back through the oval split ring for strap security.

Figure 4.

**STEP 5**

Take webbing and route it through the sliplock (see Figure 5-A). Now Make any adjustments to the fit.

Figure 5.

**STEP 6**

Loop the webbing back through the sliplock (see Figure 6-A) to lock strap in place. After using your camera and ensuring a proper and comfortable fit, trim webbing (see Figure 6-B) and seal with flame.

Figure 6.

**STEP 7**

Installation complete!

**STEP 8**

You can use the extra lug on your CamStrap adapter to attach your neck strap.

(See Figure 8-A)
